

I am an Android Developer with a strong passion for mobile development and a solid foundation in Kotlin and Jetpack Compose. My interest in software engineering started at a very early age and developed into a structured technical background through technical high school and a B.Sc. in Information Systems Engineering.

In recent years, I have deliberately focused on strengthening my Android skills, building Kotlin-based applications, working with modern Android architecture, and continuously improving my understanding of clean, maintainable code. Developing Android applications is not only my professional goal but also something I genuinely enjoy.

I am highly motivated to fully return to a software-focused role and contribute as an Android Developer. I am open to on-site work and eager to be part of a team where I can grow and deliver user-centered mobile applications.
