Dear Hiring Manager,

I am writing to apply for the Android Developer position, driven by a long-standing passion for software development and a strong focus on Android technologies. My journey with computers began at an early age, and I decided to pursue a career in software engineering while still in primary school. By the age of 10, I had already started learning programming languages such as C++, Pascal, and Basic, which laid the foundation for my technical mindset.

This early interest evolved into a solid academic background. I graduated from a technical high school specializing in Database Programming and later earned my Bachelor of Science degree in Information Systems Engineering. During my studies, I worked with a variety of technologies, including Android development (Java), C++, and embedded systems, which helped me build a broad and structured understanding of software engineering principles.

After my most recent role, I took a deliberate break to deepen my technical skills and realign my career fully toward software development. During this period, I actively developed projects using Node.js for backend development, explored Flutter, strengthened my C/C++ knowledge, and ultimately focused on Kotlin for Android development. Today, building Android applications with Kotlin and Jetpack Compose is not only my professional goal but also something I genuinely enjoy and pursue consistently.

I am highly motivated to return fully to a software-focused role and contribute as an Android Developer in a team-oriented environment. I am open to on-site work and eager to be part of a company where I can grow, take responsibility, and deliver high-quality, user-centered mobile applications.

Thank you for taking the time to review my application. I would welcome the opportunity to further discuss how my background, motivation, and technical focus can contribute to your Android development team.

Kind regards,
Ferhat Sanli
