Experience Overview

Independent Android Developer Freelance

May 2023 to Present (3 years)

- Developed Android applications using **Kotlin** and **Jetpack Compose** with focus on user experience and performance.
- Worked in iterative cycles, delivering small improvements based on feedback and evolving requirements.
- Designed maintainable architectures using **MVVM** and separation of concerns.
- Integrated REST APIs with **Retrofit** and implemented local persistence using **Room**.
- Handled debugging, performance improvements, and production-like issue resolution.
- Collaborated with stakeholders to translate product needs into technical solutions.

Android Developer AKTEK

October 2022 to May 2023 (8 months)

- Developed internal Android applications to monitor server-side events and operational processes in real time.
- Fetches log data from backend systems and streams updates to mobile devices using **Firebase**.
- Stored and processed incoming data locally using **Room** for offline access and historical analysis.
- Designed data-driven UI with **Jetpack Compose** to visualize logs, detect anomalies, and highlight critical events.
- Implemented logic to correlate historical log records and generate actionable insights for internal users.
- Built a process-specific alerting system that helped teams quickly identify issues and understand their context.

Android Developer VBM

September 2021 to October 2022 (1 year 2 months)

- Developed an Android application to monitor and manage **UiPath Orchestrator** processes via REST APIs.
- Integrated backend services using **Retrofit** to fetch process status, job execution data, and system metrics.
- Built real-time dashboards to track RPA workflows and visualize execution states.
- Designed UI using **Jetpack Compose** with focus on clarity and operational usability.
- Improved visibility of automation processes, enabling faster detection of failures and bottlenecks.

Languages

English - Professional Working Proficiency
Turkish - Native

Skills

- Kotlin**
- Android SDK**
- Jetpack Compose**
- MVVM**
- Clean Architecture**
- Retrofit**
- REST APIs / JSON**
- Room**
- Hilt**
- Firebase**
- StateFlow**
- Ktor**
- Linux / Raspberry Pi**
- GitHub Actions**
- CI/CD**

Projects

WhoConnected

Android network device tracking app built with **Kotlin**, **Jetpack Compose**, **MVVM** and REST API communication. Focused on real-time device visibility, practical troubleshooting, and responsive UI.

CompRC

Computer Remote Controller app connecting Android to a **Kotlin Ktor** API server running on Raspberry Pi/Linux. Implemented endpoints for server shutdown and service log retrieval, consumed from a Compose UI using **Retrofit**, **Clean Architecture**, **MVVM**, **StateFlow** and animations.

Education

Muğla Sıtkı Koçman University
BSc Information Systems Engineering
