

Ferhat Sanli

Android Developer (Kotlin • Jetpack Compose)

Amsterdam, Netherlands • EU Citizenship
ferhatsanli95@hotmail.com | LinkedIn | Github

Profile

Android Developer with ~2+ years of experience building scalable mobile applications using **Kotlin** and modern Android technologies. Strong background in developing real-time, data-driven applications integrated with backend services. Experienced in **MVVM**, **Clean Architecture**, and building responsive UIs following **Material Design** principles. Focused on performance optimization, maintainability, and delivering intuitive user experiences.

Skills

- Kotlin
- Android SDK
- Jetpack Compose
- MVVM
- Clean Architecture
- Retrofit
- REST APIs
- Room
- Coroutines
- Flow
- Navigation
- Hilt
- Firebase
- JUnit
- Espresso
- Performance Optimization
- CI/CD

Professional Experience

Independent Android Developer | Freelancer

May 2023 - Present (3 years)

- Designed and developed Android applications using **Kotlin** and **Jetpack Compose** with focus on performance and user experience
- Built responsive and accessible UI components aligned with **Material Design** principles
- Implemented scalable architecture using **MVVM** and **Clean Architecture**
- Integrated backend services using **Retrofit** with asynchronous handling via **Coroutines** and **Flow**
- Used **Room** for local persistence, offline access, and structured data handling
- Improved application performance, memory usage, and responsiveness through continuous optimization
- Structured code for maintainability, testability, and long-term scalability

Android Developer | AKTEK

Oct 2022 - May 2023 (8 months)

- Developed Android applications to monitor backend systems with near real-time data streaming
- Integrated backend services and real-time data pipelines using **Firebase** and REST APIs
- Stored and managed local data using **Room** for offline access and efficient data handling
- Built data-driven UI using **Jetpack Compose** to visualize operational events
- Improved system observability by enabling faster issue detection and analysis
- Optimized app performance including memory usage and UI responsiveness

Android Developer | VBM

Sep 2021 - Oct 2022 (1 year 2 months)

- Developed Android application integrating with backend services via REST APIs
- Used **Retrofit** for API communication and asynchronous data handling
- Built real-time dashboards to monitor system processes and job execution data
- Designed user interfaces with **Jetpack Compose** focused on usability and clarity
- Enhanced visibility into backend processes, improving operational efficiency

Projects

Network Device Monitoring Android App (WhoConnectedNG)

[GitHub Repository](#)

- Built an Android application using **Kotlin** to visualize connected devices and real-time network activity
- Designed a mobile-first monitoring experience focused on clarity, responsiveness, and practical usability
- Integrated the Android app with custom REST API endpoints exposing structured device data
- Implemented automated network scanning on a **Raspberry Pi**, collecting MAC address data at scheduled intervals
- Developed a lightweight **Node.js** backend service to provide device data to the Android application
- Worked across mobile, backend, networking, and automation layers in a single end-to-end system

Education

BSc Information Systems Engineering
Muğla Sıtkı Koçman University

Languages

English - Professional Working Proficiency
Turkish - Native
