Experience Overview

Independent Android Developer Freelance

May 2023 to Present (3 years)

- Developed Android applications using **Kotlin** and **Jetpack Compose** with focus on scalability and performance.
- Designed maintainable architectures using **MVVM**, **StateFlow**, and clean separation of concerns.
- Integrated REST APIs with **Retrofit** and implemented local persistence using **Room**.
- Handled debugging, monitoring, and production-like issue resolution in Agile-style development cycles.

Android Developer AKTEK

October 2022 to May 2023 (8 months)

- Developed internal Android applications to monitor server-side events and operational processes in real time.
- Fetched log data from backend systems and streamed updates to mobile devices using **Firebase**.
- Stored and processed incoming data locally using **Room** for offline access and historical analysis.
- Designed data-driven UI with **Jetpack Compose** to visualize logs and highlight critical events.
- Built process-specific alerting mechanisms that improved operational response times.

Android Developer VBM

September 2021 to October 2022 (1 year 2 months)

- Developed an Android application to monitor and manage **UiPath Orchestrator** processes via REST APIs.
- Integrated backend services using **Retrofit** to fetch process status and execution data.
- Built real-time dashboards to track RPA workflows and visualize execution states.
- Designed UI using **Jetpack Compose** with focus on clarity and operational usability.
- Took ownership of the monitoring application lifecycle including feature development, operational visibility improvements, and issue investigation workflows.

Languages

English - Professional Working Proficiency
Turkish - Native

Education

Muğla Sıtkı Koçman University
BSc Information Systems Engineering

Skills

- Kotlin
- Jetpack Compose
- MVVM
- Clean Architecture
- Retrofit
- REST APIs / JSON
- Room
- Hilt
- Firebase
- StateFlow
- Coroutines
- Espresso
- Agile / Scrum
- CI/CD
- GitHub Actions

Projects

WhoConnected

Android network monitoring application built with **Kotlin**, **Jetpack Compose**, and **MVVM**. Developed a **Node.js** API server running on Raspberry Pi to perform **nmap**-based network scans and device discovery. Designed the Android UI with Compose and integrated Android-Raspberry Pi communication using **Retrofit** and REST APIs.

CompRC

Computer Remote Controller app connecting Android to a **Kotlin Ktor** API server running on Raspberry Pi/Linux using **Retrofit**, **Clean Architecture**, **MVVM** and **StateFlow**.
