Experience

Independent Android Developer Freelance

May 2023 to Present

- Worked remotely on small-scale Android development tasks and ongoing application improvements.
- Resolved bugs, investigated application issues, and implemented targeted fixes.
- Developed and refined smaller features based on evolving requirements and feedback.
- Continued improving practical Android development skills through independent projects and real-world problem solving.

Android Developer AKTEK

October 2022 to May 2023

- Contributed to internal Android applications used to monitor server-side events and operational processes.
- Worked with **Firebase** and **Room** to handle incoming data, local persistence, and historical records.
- Built and maintained data-driven **Jetpack Compose** UI for displaying logs and operational information.
- Supported debugging, issue investigation, and incremental improvements as part of the development team.

Android Developer VBM

September 2021 to October 2022

- Started professional Android development by building internal tools for monitoring **UiPath Orchestrator** processes.
- Worked with **Kotlin**, **Retrofit**, REST APIs and **Firebase** to retrieve and display backend process data.
- Built dashboards with **Jetpack Compose** to visualize process status, job execution data, and system events.
- Gained hands-on experience with Android architecture, API integration, debugging, and iterative feature development.

Education

Muğla Sıtkı Koçman University
Bachelor of Science
Information Systems Engineering

Languages

English — Professional Working Proficiency
Turkish — Native

Projects

ComApp

- Built a remote communication system connecting an **Android application** with a **Raspberry Pi**.
- Implemented real-time command delivery and execution results using **Firebase Realtime Database**.
- Added an alternative domain-based **REST API** communication path using **Retrofit**.
- Developed the Android client with **Kotlin** and **Jetpack Compose**.

WhoConnected

- Built an Android application for discovering and tracking devices on local networks, using **Nmap** for network discovery and analysis.
- Developed real-time device visibility and network monitoring features for practical troubleshooting.
- Integrated **REST API** communication using an **MVVM**-based application structure.
- Developed the Android client with **Kotlin** and **Jetpack Compose**, with focus on responsive UI and performance.

Skills

Android

Kotlin, Jetpack Compose, Android SDK, StateFlow

Architecture

MVVM, Clean Architecture, Hilt

Data & APIs

Firebase, Retrofit, REST APIs, JSON, Room

Systems & Networking

Linux, Raspberry Pi, Nmap, Ktor

Development

GitHub Actions, CI/CD
